VPGC offers the above turkey products in our Conventional, NAE and Organic programs.

Programs

▶ *Conventional*

Our conventional turkey program has been with us since the beginning of our company. These birds are fed a diet that is specially formulated by an animal nutritionist, and only given antibiotics when deemed medically necessary by our veterinarian.

▶ *NAE (No Antibiotics Ever)*

Our NAE program turkeys receive no antibiotics at any point in their life. The turkeys are fed a specially formulated, all vegetarian diet that is free from any animal by-products. These growers manage their farms according to our special set of standards for NAE birds, and our entire NAE program is Process Verified by the United States Department of Agriculture.

▶ *Organic*

VPGC administers a proprietary organic program to raise turkeys that carry the *Certified Organic* seal that is given by the United States Department of Agriculture. Each Organic farm gives the birds a unique environment with extra space within the barn and daily access to the outside where they are free to roam. These turkeys are never treated with antibiotics throughout their life, and are fed an all vegetarian diet that contains 100% organic ingredients including non-GMO grains and no animal by-products.
